

# SFP-RIB Heated Rib System

## Description

The SnoFree™ Heated Rib system is to be used on standing seam roofing. The SFP-RIB easily attaches to each rib to create an open channel for flowing water to easily continue off the roof. With the cable completely protected with the SFP-RIB system, the possibility of ice damage or slides pulling the cable off the roof is greatly reduced. Combine the SFP-RIB system with an engineered snow retention system for added protection against slides. The SFP-RIB keeps the aesthetic look of the original standing seam roof any ice dams that could form. All SFP systems come standard with a durable 30 year Kynar finish to match most desired looks.

- Beautifully heats your standing seam metal roof eaves.
- Simple to access.
- Attractive and completely hides the wiring along the rib.
- Simple to Install
- Built to match standing seam roof color.
- Available for all types of Standing Seam roofing.
- Available in Steel, Aluminum, Copper, Cold Roll, etc.

## Applications

For all buildings with a pitch greater than 1/12

### For new roof installations:

Standing Seam Metal

### For installation on existing roofs:

Standing Seam Metal

## Key Sections

1. Standing Seam Roofing
