

# SFP-VE Existing Valley Panel

## Description

The SnoFree™ 4" or 6" Existing Valley Panel is an efficient method to control any ice dams that would form within a valley. Effectively clearing both sides of the valley between 6"-10". The SFP-VE panel will create all the open area for water to safely flow from the valley without the possibility to refreeze over unheated portions of the roof. The SnoFree™ heated panel system gives an aesthetic look to any structure while keeping a more efficient and cleaner method to eliminate ice dam issues in a valley, transition area, or dormer. All SFP systems come standard with a durable 30 year Kynar finish to match most desired looks.

- Effectively controls Ice and Snow with 2 Passes of Cable
- Opens a pathway for water to run to the eave.
- Comes with a 30 Year protective Kynar finish.
- Sheet metal pieces come in 48" widths for ease of handling.
- An economical product to alleviate ice dams in existing valleys, transition areas, dormers and all without the need to re-roof.
- System Parts List:
  - 1—Aluminum Extrusion (4" or 6")
  - 1—SFP 24 ga. Kynar Steel Cover
  - 1—SFP 24 ga. Kynar Steel Expansion Joint

## Applications

For all buildings with a pitch greater than 4/12

### For new roof installations:

Asphalt Shingle  
Wood Shake Shingles  
Tile or Slate Roofs  
Standing Seam Metal

### For installation on existing roofs:

Asphalt Shingle  
Wood Shake Shingles

## Key Sections

1. Chosen Roofing Material
2. SFP-4V-E Cover
3. Drip Edge
4. 4" Extrusion with 2 Passes of heat cable on both sides of the valley.
5. Existing W Valley or Weaved Valley
6. 2806-R / 6 Watts per Foot Heat Cable
