

SFP-VE Existing Valley Panel

- * Effectively controls Ice and Snow with 2 Passes of Cable
- * Opens a pathway for water to run to the eave.
- * Comes with a 30 Year protective Kynar finish.
- * Sheet metal pieces come in 48" widths for ease of handling.
- * An economical product to alleviate ice dams in existing valleys, transition areas, dormers and all without the need to re-roof.
- * System Parts List:
 - 1—Aluminum Extrusion (4" or 6")
 - 1—SFP 24 ga. Kynar Steel Cover
 - 1—SFP 24 ga. Kynar Steel Expansion Joint

Description

The Sno-Free 4" or 6" Existing Valley Panel is an efficient method to control any ice dams that would form within a valley. Effectively clearing both sides of the valley between 6"-10". The SFP-VE panel will create all the open area for water to safely flow from the valley without the possibility to refreeze over unheated portions of the roof. The Sno-Free heated panel system gives an aesthetic look to any structure while keeping a more efficient and cleaner method to eliminate ice dam issues in a valley, transition area, or dormer. All SFP systems come standard with a durable 30 year Kynar finish to match most desired looks.

Applications

For all buildings with a pitch greater than 4/12

For new roof installations:

- Asphalt Shingle
- Wood Shake Shingles
- Tile or Slate Roofs
- Standing Seam Metal

For installation on existing roofs:

- Asphalt Shingle
- Wood Shake Shingles
